

PBL (Project Bases Learning)

# -Selective Waste Collection

Xavier Clar IES Historiador Chabas

# Introduction

---

We want to prepare an BLS consisting in observing and analyzing the actual selective waste collection in our town, Denia.

We would detect deficiencies observed and plan an improvement project.

# Problem identification

---

- We can see everyday wrong waste disposal.

# Waste classification

---

It is convenient to start talking about waste collection.

# Examples of tasks the students would execute:

---

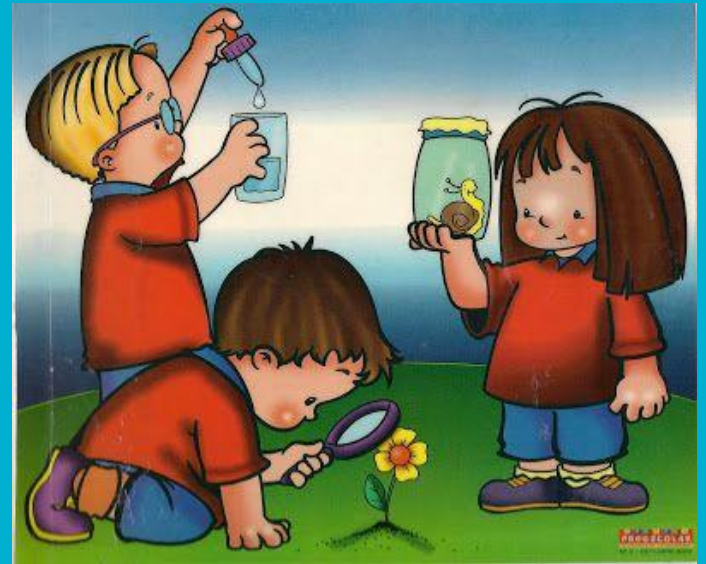

- Data collection of waste disposal in our town. Evolution through time
- Map of containers for waste.
- Possibility of a reduction of waste campaign.
- Elaboration of maps, diagrams, graphs, etc, with data collected.

# Final task

---

Our students themselves would achieve their own conclusions.

They would design a plan, if they think the actual system is to be improved.

# Final Social Action

---

- Our observations and conclusions would be shared with the town authorities.
- Our school would propose an action to solve the problem or to improve the established system.
